"I have a problem with increasing workload in Administrative Services. Anita has been diagnosed from suffering Occupation Overuse Syndrome and I have had to reorganise her workload. Part of this process has involved taking on a temporary word processor operator, Helen. Even so Greg, Anita's co worker has been concerned about the amount of work he has to take on and is worried that he might develop RSI as well. He also feels that while he sympathises with Anita , his work has become less interesting and varied.

I want you to listen to what Greg has to say."

Julie Michaels
